

# Writing a Sysbio thesis

*by Ardo Illaste*

Short summary on how to use the Latex templates to write your thesis. All the content is currently from my own thesis. Replace it with your own text.

## Files

**main.tex** The main file of the thesis. You need to add links to your chapter files here.

**classicthesis-preamble.sty** The main style file for the thesis. All your info (thesis title, your name, supervisor, etc.) goes here into the section *Re-usable information*.

**zotero-iocbio.bib** Bibtex file generated from Zotero.

**example.tex** Examples of Latex code for including tables, figures.

## Folders

**figures/** Your figures.

**graphics/** Logos used in the document (university, TTU press, etc.).

**input/chapter/** Your chapters. One tex file per chapter.

**input/pages/** Pages for the thesis layout. Most of these you don't need to touch.

**input/small/** Texts like the preface, abstract, list of publications, acronyms, etc. Modify with your own content.

**papers/** PDFs of your papers and your CV.
